

ABSTRACT

A computerized wagering gaming system and method is disclosed. The system includes a universal computerized game system operable to control a
5 computerized wagering game, including a controller interface and a universal
controller for processing an operating system instructions. The system includes
game system devices and a game translator system for translating game events
between the game system devices and the universal game control system. The
controller interface operates as an interface between the universal controller and the
10 game translator system.
